UAID: 300349320

Course: CSCE 2004

Task: lab7b

Syntax - Correct

Program source:

```
        PricePerTicket = 45;
    else if (Concert == 'T')
        PricePerTicket = 40;

    Cost = PricePerTicket * NumTickets;

    if (NumTickets >= 5)
        Cost *= 0.9; // Apply 10% discount

    return Cost;
}

int main() {
    char Concert = 0;
    int NumTickets = 0;
    float Cost = 0;

    Concert = GetConcert();
    NumTickets = GetNumTickets();
    Cost = GetCost(Concert, NumTickets);

    cout << "\nThe customer has placed the following order:\n";
    cout << "Concert: " << Concert << endl;
    cout << "Number of Tickets: " << NumTickets << endl;
    cout << "Total Cost: " << Cost << endl;

    return 0;
}
```

Test #1 - Correct

Test input:

```
B
4
```

Your program output:

```
The following concerts are available:
    B for Beyonce
    L for Lady Gaga
    T for Taylor Swift
Enter the letter for the concert you want:
```

Expected program output:

The customer has placed the following order:
Concert: B
Number of Tickets: 4
Total Cost: 140

Test #2 - Correct**Test input:**

L
10

Your program output:

The following concerts are available:
B for Beyonce
L for Lady Gaga
T for Taylor Swift
Enter the letter for the concert you want:

Expected program output:

The following concerts are available:
B for Beyonce
L for Lady Gaga
T for Taylor Swift
Enter the letter for the concert you want:

Test #3 - Correct**Test input:**

T
2

Your program output:

The following concerts are available:
B for Beyonce
L for Lady Gaga
T for Taylor Swift
Enter the letter for the concert you want:

Expected program output:

The following concerts are available:
B for Beyonce
L for Lady Gaga
T for Taylor Swift
Enter the letter for the concert you want:

Score = 100%
